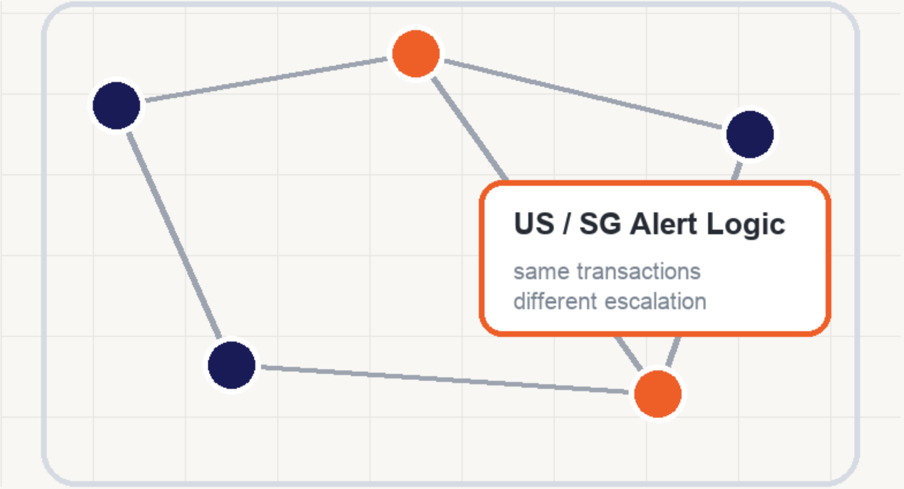
Jurisdiction-Aware AML Alert Calibration Tool

Citibank N.A. / Citi Singapore



US vs Singapore

AML / KYC

Option C

Presenter: Zhou Qiaoyi G2505225E

Product overview

The tool turns jurisdictional AML differences into testable alert logic.

Core proposition

The same transaction may carry a different compliance meaning in the US and Singapore.

- US mode: sanctions, USD nexus, structuring, SAR triggers.
- Singapore mode: CDD, beneficial ownership, wire information, STRO indicators.
- Output: alert score, alert reason, and workload impact.

1. Synthetic transactions
2. Jurisdiction configuration
3. Alert score + reasons
4. Workload trade-off

1,000
Synthetic transactions
Generated with reproducible script

Alert rate
Primary metric
Supported by workload and capture

Support
Tool role
Not automatic SAR / STR filing

Why this product is right for AZ

AZ is positioned as a RegTech firm that makes AML monitoring explainable and jurisdiction-aware.

Company fit

- AZ translates regulatory expectations into configurable monitoring logic.
- Citi is a realistic use case because it operates across the US and Singapore.
- The tool gives senior management measurable trade-offs, not just policy language.

What it solves beyond a memo or spreadsheet

Memo	describes rules
Spreadsheet	lists transactions
This tool	tests how thresholds change alerts, capture, and workload

Regulatory divergence becomes different scores

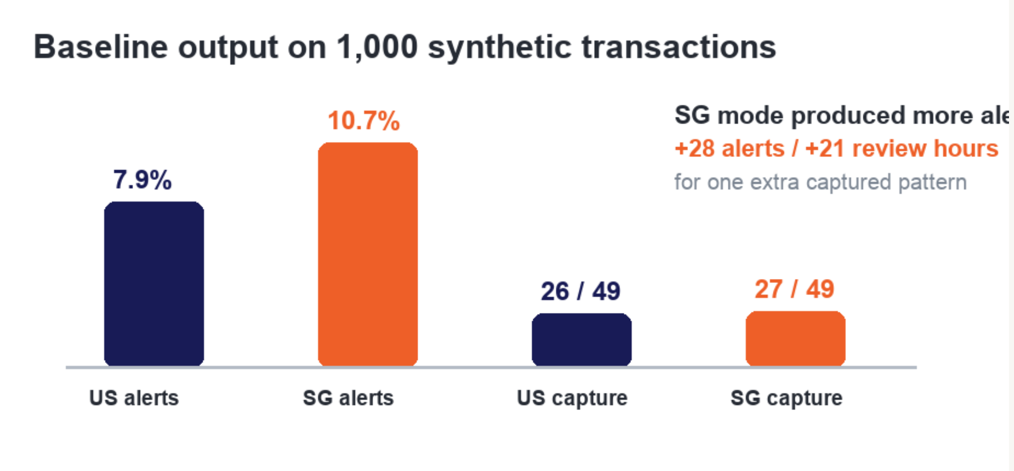
The tool does not ask which jurisdiction is stricter; it shows what each setting prioritises.

US mode

- Sanctions score
- USD / US nexus
- Structuring pattern
- SAR review trigger

Singapore mode

- CDD quality
- Beneficial ownership
- Wire information
- STRO review indicator



Interpretation: Singapore mode captured one more suspicious pattern but created 28 more alerts and about 21 extra review hours.

Boundary choice: decision support, not autopilot

The product is valuable because it makes trade-offs visible while keeping accountability with human reviewers.

Decision support, not automated filing

What it does not do

- Automatically file SARs or STRs
- Freeze transactions or offboard customers
- Provide legal advice
- Replace compliance officers

Management recommendation: use the tool as a calibration layer before policy changes reach live monitoring.
